

LOGMASTER SAW HORSE

**THE SAFEST & STRONGEST
CHAINSAW LOG BENCH
AVAILABLE!**

CE

Part No.
090

Using a chainsaw is hazardous, and even the most experienced operators can become careless or oblivious to the dangers - especially during repetitive tasks such as cutting logs.

Prolonged use of a heavy chainsaw can also cause backache and increase the likelihood of shortcuts being taken, leading to accidents.

The Logmaster overcomes these problems and is widely regarded as one of the safest saw horses available.

Its all-welded, thick-plated steel construction, weighing 17kg, provides an exceptionally stable and robust workbench, unlike the cheap copies that weigh around 7kg.

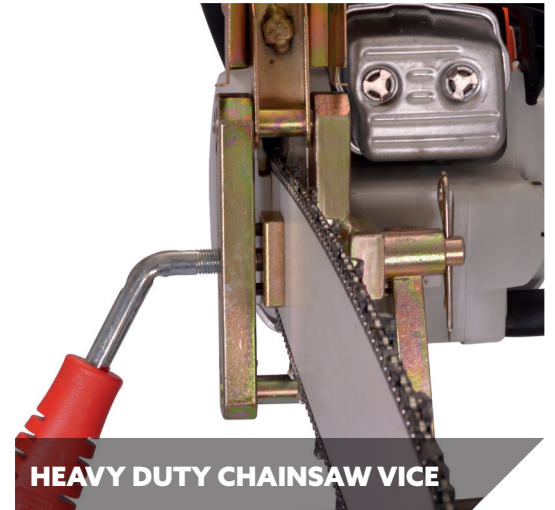

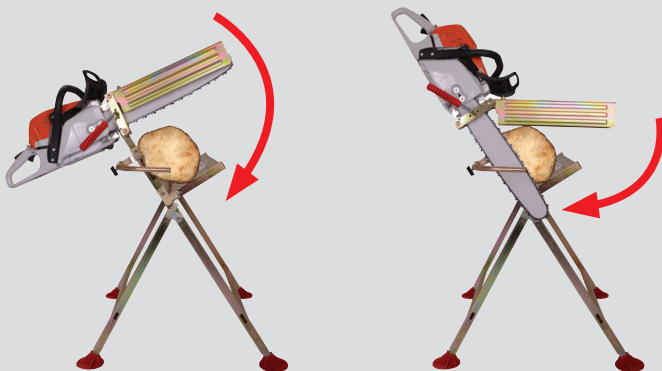

LOGMASTER SAW HORSE

The chainsaw is clamped to the Logmaster, and the whole weight of the saw is then carried, on the frame, leaving the operator free to hold the log in position with one hand, and swing the chainsaw through the log with the other.

This simple solution to an old problem makes the job easier, faster, and safer. Anyone with experience of chopping logs will appreciate the value of this clever design. This simple and robust saw horse will change the way you chop logs forever.

The Logmaster makes working fast, safe and effortless unlike the conventional method which requires constant bending, lifting and straining, starting and stopping. Simply rotate, the bench takes the full weight of the chainsaw.

HEAVY DUTY CHAINSAW VICE

For maximum results use the Portek Logmaster heavy duty saw horse alongside either the Charger impact log splitter or the Matador hydraulic log splitter.
